Overview of molecular subtype of medulloblastoma and role of MRI in their identification

Published On: October 11, 2022 | Pages: 005 - 010

Author(s): Ashfaq Ahmad* and Aisha Islam

Medulloblastoma is the most prevalent malignant brain tumor in children, accounting for roughly 15% to 20% of all malignancies of the Central Nervous System (CNS), for 40% of childhood, tumors are in the posterior fossa.

Medulloblastoma is a heterogeneous combination of several subgroups with discrete characteristics, rather than a homogeneous illness. Genomic ...

An isolated intra-cranial rosai-dorfman disease radiologically mimicking the meningioma

Published On: April 07, 2022 | Pages: 001 - 004

Author(s): Imtiaz Ali*, Ashok Kumar, Rizwan Ajmal, Danial Khalid, Bushra Shamim and Mahum Zaidi

Rosai-Dorfman disease is an uncommon benign non-Langerhans cell histiocytosis proliferative disorder. It commonly involves the lymph nodes and is classically presented with massive cervical lymphadenopathy. It can also involve the extra-nodal sites of the body and is reported in 43% of Rosai-Dorfman disease cases. The central nervous system is rarely involved in Rosai ...
